

Floods: Thailand – Estimated Flood Impact Analysis
Modeled Preliminary Impact and Loss Estimates
Flood Extent as of 22 September 2019

Maximum potential population exposure

54,473

people inundated by flooding

children <15 yrs

adults 15-64 yrs

elderly >64 yrs

114 million

Kcals per day

5,447

100-liter waste bins

162,874

liters of water per day

187,932

square meters of shelter

Total Capital Exposure **\$620 million**

Thailand

- The Department of Disaster Prevention and Mitigation (**DDPM**) of Thailand has reported that as of today (25 September 2019) at 06:00 (UTC +7), flooding has affected at least 32 provinces across Thailand, particularly in the northeastern part. Floods have receded in most of the provinces affected. However, there are 4 provinces (Ubon Ratchathani, Yasothon, Srisaket, and Roi-et) where the floods are still severe and in critical condition, with at least 17,951 people spread out in 41 evacuation centres in Ubon Ratchathani, Sri Saket, and Yasothon. The flood is still detected based on Sentinel Asia's observation satellites data.
- After the National EOC Coordination Meeting chaired by the Deputy Prime Minister, General Prawit Wongsuwan on Monday, 23 September 2019, **DDPM** concluded that the response is within national capacity. Currently the situation is improving and entering the early recovery phase. No additional external resources will be needed at this time.
- The AHA Centre is continuously monitoring the situation and will issue updates should there be any significant development.
