DISCLAIMER

The AHA Centre was established in November 2011 by the
Association of Southeast Asian Nations (ASEAN) Member
States to facilitate cooperation and coordination among
Member States, relevant agencies of the United Nations
and international organisations in disaster management and
emergency response.

This update consists of significant natural disaster events
that occurred in ASEAN Member States – Brunei
Darussalam, Cambodia, Indonesia, Lao PDR, Malaysia,
Myanmar, Philippines, Singapore, Thailand, and Viet Nam.
The disasters recorded include Drought, Flood, Earthquake,
Tsunami, Volcano, Wind, Landslide, and Storm.

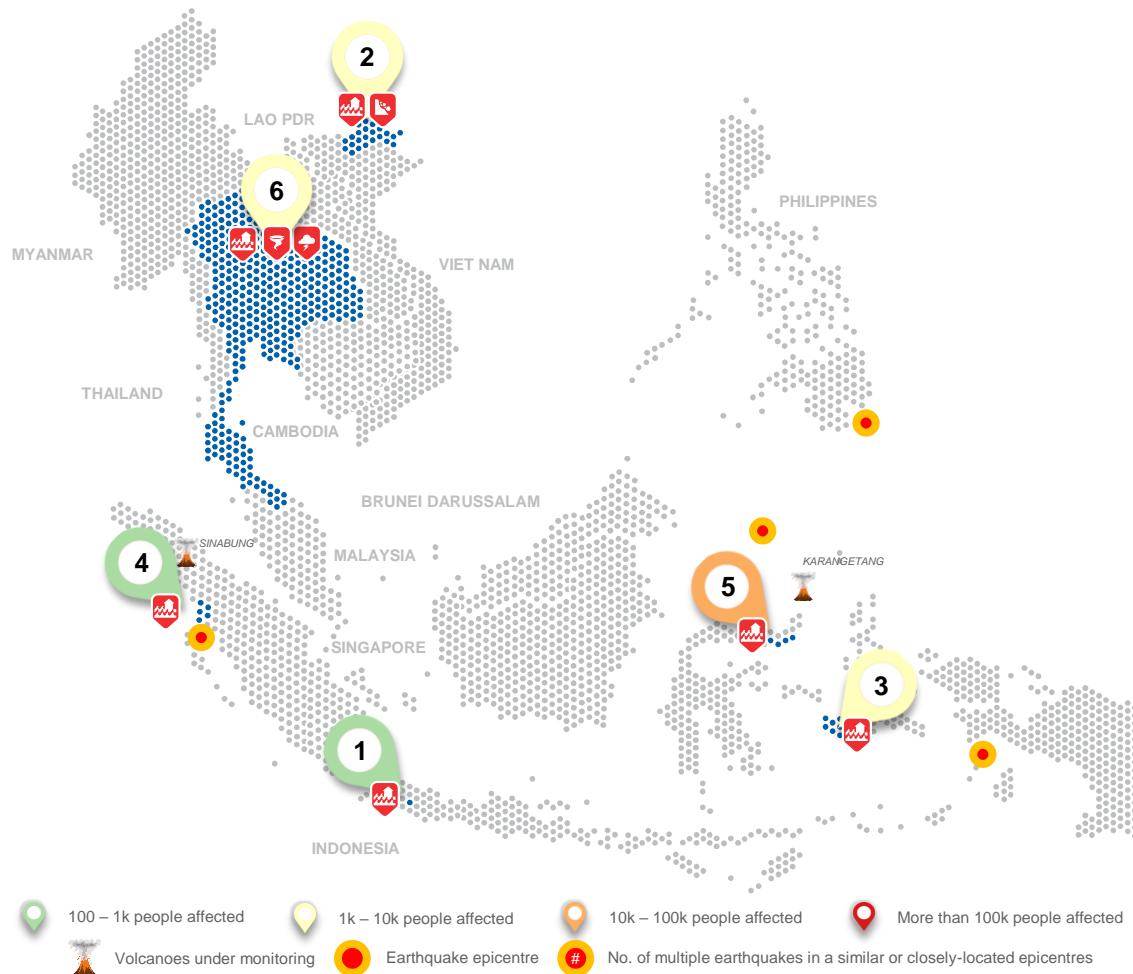

The use of boundaries, geographic names, related
information, and potential considerations for response are
for reference, not warranted to be error-free or implying
official endorsement from ASEAN Member States.

REGIONAL TALLY

Note: Estimations are based on data reported/confirmed by National
Disaster Management Organisations of each respective ASEAN
Member State and other verified sources

01 Indonesia, Flooding in Sukabumi Regency, West Java

21 Jul 2020 | More details at: [ADInet Report 1732](#)

02 Viet Nam, Flooding and Landslides in Ha Giang and Cao Bang Provinces

22 Jul 2020 | More details at: [ADInet Report 1734](#)

03 Indonesia, Flooding in Buru, Maluku

22 Jul 2020 | More details at: [ADInet Report 1730](#)

04 Indonesia, Flooding in Mandailing Natal Regency, North Sumatra

23 Jul 2020 | More details at: [ADInet Report 1731](#)

05 Indonesia, Flooding in South Bolaang Mongondow Regency, North Sulawesi

24 Jul 2020 | More details at: [ADInet Report 1733](#)

06 Thailand, Floods, Storms, and Winds in North, Northeast, East, Central, and Southern Regions

25 Jul 2020 | More details at: [ADInet Report 1735](#)

REGIONAL SUMMARY:

Multiple flooding events have occurred due to high-intensity rainfall in Indonesia as reported by Indonesia's Badan Nasional Penanggulangan Bencana (BNPB). Meanwhile, flooding, storms, and winds in 12 provinces of Thailand were reported by the Department of Disaster Prevention and Mitigation (DDPM). Lastly, in Viet Nam, the Viet Nam Disaster Management Authority (VNDMA) reported that floods and landslides caused by heavy rainfall has caused fatalities in two (2) provinces.

HIGHLIGHT:

According to the VNDMA, Ha Giang province in Viet Nam recorded the heaviest rainfall within 24 hours since 1961. This reportedly resulted in flash floods and landslides, causing severe damage to people's lives and houses. Five (5) fatalities were reported in the province and hundreds of houses, damaged and flooded.

On another note, high-intensity rainfall causing the overflow of Salong, Molibagu, and Tolondadu Rivers was reported by BNPB to have flooded and affected 18.8K households in South Bolaang Mongondow Regency in North Sulawesi with water heights from 50-150 cm. Affected people have evacuated into village halls and to their relative's houses.

HYDRO-METEO-CLIMATOLOGICAL:

GEOPHYSICAL:

Four (4) significant earthquakes (M≥5.0) were recorded in the region by Indonesia's Badan Klimatologi dan Geofisika (BMKG) and the Philippine Institute for Volcanology and Seismology (PHIVOLCS). Two (2) volcanoes in Indonesia (Karangetang, and Sinabung) under Alert Level III - Siaga (PVMBG) are under close monitoring. Lastly, Ibu, Semeru and Dukono in Indonesia remain on Alert Level II despite recent volcanic activity per PVMBG.

OUTLOOK:

The ASMC forecasts wetter conditions over much of the equatorial region, as well as the southern and eastern coastal regions of Mainland Southeast Asia and the Philippines. According to ASMC's regional assessment of extremes, there are moderate increase in chances of a heavy rainfall event (Eastern Indonesia, southern Thailand and parts of Borneo) and extended dry conditions (Java and northern Sumatra, Indonesia). Extreme hot conditions are very likely for parts of Myanmar, western Thailand, Lao PDR, and northern Philippines.
